

Session 10 - Data is the new Oil

Theory:

- What is prop drilling?
- What is lifting the state up?
- What is Context Provider and Context Consumer?
- If you don't pass a value to the provider does it take the default value?
- Difference between executing the function on onClick vs having the callback function.
- `onClick = {handleOnClick()}` vs `onClick = { () => console.log("hello") }`

Coding:

- Theme change between dark mode and light mode in header, footer and cards components.
