Assignment

- Read about Formik?
- What is the purpose of dependency array in useEffect? What is the difference when it is used and not used?
- What the difference between optional(?) and && to check the null object?
- Try out rafce, react snippets.
- What is children and loader in outlet of react-router ?
- "Object are not valid as a react child" when do we get this error in react ?
- Read more about react-router-dom
- Read about GraphQL - under-fetching and over-fetching of data

Coding Assignment -07:

1. Implement routing in your App:
   • create Error component
   • create user profile with git hub api and make it dynamic
   • use <Link/>
